

Focus on the Face

Comprehensive Surgical, Laser, and Aesthetic Facial Rejuvenation

What options do people have when the face they see in the mirror is not a reflection of how they feel on the inside? "Plenty," says board-certified facial plastic surgeon Pradeep K. Sinha, M.D., Ph.D., FACS. "Modern medicine now offers a wide number of surgical and nonsurgical approaches. Fortunately, many of these new procedures require very little downtime and are less expensive and less invasive than conventional facial surgery."

As a subspecialist in the area of the face, Dr. Sinha began his practice with a commitment to bring patients interested in facial rejuvenation the most comprehensive array of treatment options.

"There are no one-size-fits-all solutions. Each case is distinct and every patient

deserves a truly customized treatment plan that takes into consideration such factors as risks, cost, recovery time, and possible discomfort," explains Dr. Sinha, founder of Atlanta Institute for Facial Aesthetic Surgery.

Remarkable Procedures Improve Your Appearance Without Disrupting Your Life

As a surgeon, Dr. Sinha has expertise in the most advanced and minimally invasive surgical techniques. Facial rejuvenation surgery is performed endoscopically through hidden incisions. His pioneering use of fibrin sealants and tissue adhesives has allowed his patients to recover from facelift surgery within days as opposed to weeks, with minimal to no bruising.

Most surgery is performed in the privacy and safety of Dr. Sinha's state-of-the-art, fully certified surgery center located adjacent to Northside Hospital.

One of the foremost laser experts in the Southeast, Dr. Sinha serves as an expert technology resource for the largest manufacturer of aesthetic lasers. He operates one of the largest laser centers in Atlanta. The center features IPL FotoFacial®, a breakthrough treatment that produces consistent and dramatic improvements in sun damage, redness, broken capillaries, and fine lines.

The center also offers Thermage, called the "non-surgical facelift." Thermage is an especially good choice for those who need rejuvenation around the eyes, face, and neck but don't quite need a facelift. Other lasers help with vein removal, hair removal, and skin resurfacing.

Dr. Sinha's approach to facial rejuvenation is both surgical and non-surgical. Due to his expertise and experience, Dr. Sinha's practice is one of the few in Georgia to be selected as a Botox® Cosmetic National Training Center. In addition to Botox® injections, services include Restylane, Radiance Cosmoderm and Hylaform injections, microdermabrasion, and Obagi Blue Peel.

Pradeep K. Sinha, M.D., Ph.D., FACS

Dr. Sinha's credentials place him among the nation's most respected in his field. He is Board certified in the field of Facial Plastic Surgery as well as Otolaryngology and Head & Neck Surgery. He has been inducted as a Fellow of the American College of Surgeons and is a member of numerous local, national, and international professional surgical societies.
